(2) Mystical Revelations and Cycle Science

Beyond Apocalypse (Part 2) – Mystical Revelations and Cycle Science

This is the first of two chapters that will be published in short succession. This content contains futurology based on cycle science and the mystical sciences. Contemplative thought on the themes presented is required. Readers are encouraged to approach the text with a critical yet open mind and to conduct their own further study.

Introduction

Due to renewed interest in the subject of *cycle science*, important information covered in a previous work (*Navigating the Greatest Shift in 26,000 Years*) is concisely presented in some segments in this essay, with additional depth added with regard to some of the important factors.

Cycle Science

The process of analysing historical events with a focus on social phenomena within the context of ancient, metaphysical cycles is a form of lost yet recovering science that could be termed 'cycle science'. It is a multidisciplinary approach that considers a broad range of factors, as required.

A study of human consciousness and social trends produced or influenced by the 'atmosphere' or 'spirit' of an age (its *zeitgeist*) is one aspect of it, while the technical side of *cycle science* involves a study of the astronomical movements and positioning of celestial phenomena.

Combined with other complementary study areas in the domains of psychology, sociology, anthropology, and archaeology, a holistic type of human science emerges, which places great value on the role of humans as evolving beings on Earth with the aim of deepening that understanding.

Multidimensionality

Recognising the existence of *unseen* cyclic influences and processes that affect the world brings an awareness of invisible yet real metaphysical and energetic dynamics that play important roles in our perception of reality. Often, *clear evidence of Divine Creativity* is revealed to dedicated students, making *cycle science* a spiritual or a *holy science* (which also relates to an important book, *The Holy Science*) ¹

An awareness of a *multidimensional reality* governed by numerous turning and shifting cycles impresses upon the learner that *linearity* is, in fact, a mere *illusion*, a phenomenon that simply *appears* as permanency. Consequently, a *quantum leap* in human consciousness is not necessarily required to arrive at a perception of *multidimensionality*, as it can be achieved (at least partially) through *cycle science*.

Mystical Revelations

The answer to the question, "What is Mysticism?" can be summed up in a few comprehensive words, "Mysticism is Scientific Knowledge of Divine Truths." – Johanna Brandt (The Millennium). ²

The potential for a whole new *spectrum of mystic awareness and insight* opens to students who become aware of *multidimensionality*. Through this type of work, an invisible, metaphysical architecture in the cosmos is revealed, and a *Divine Presence* in the shaping of reality becomes self-evident. Those who engage in *cycle*

science with reverence become susceptible to having *direct experiences* of elements of the Divine, which encapsulate what mystical encounters are about.

The importance of this factor is associated with the promise of a new era – the era we are presently entering – that brings a return to *revelatory mysticism*, as revealed to selected mystics and prophets of the past. ^{2, 3}

Mysticism is Harmony between God and man. It is the gift by which the created comes into unmistakable contact with the Creator, the medium of conscious communion, through which the Will of God is revealed to man. – Johanna Brandt (The Millennium). ²

Knowledge that the world is governed by *metaphysical cycles* constitutes *scientific knowledge of Divine truths*, ² because cyclic laws are natural laws, and *cycle science* provides an entrance into the *realm of mysticism* as it provides access to unseen, yet *Divine and intelligently designed, metaphysical realities*.

Mysticism is the art of union with Reality. The mystic is a person who has attained that union in greater or less degree; or who aims at and believes in such attainment. – Evelyn Underhill (Practical Mysticism).

⁴

Individuals who are intuitively and spiritually inclined and are drawn toward these potentialities are encouraged to explore the themes and topics presented in this essay further (see also referenced materials).

A World as a Cycle

A 'world' is a cycle, and a cycle is a 'sun'. ^{5, 6} As one sun sets, another *rises*, and as one world *ends*, another *commences*. Every *World Cycle* has its own reality, which is different from previous or later *suns*. The sun never sets forever, and the world never ends permanently. Different versions of the world in the form of *world cycles* emerge in time, one following the other.

The idea of successive 'worlds' or 'suns' can be found in many indigenous societies of the Americas. The Hopi people of the Southwest envision cycles of emergence that progress in a way so similar to that recorded by the Maya that they are surely of the same essential world view. – Kenneth Johnson (The Mayan Prophecies). ⁵

Once this timeless pattern is correctly understood, as the ancients did, the purpose of the *end-times archetype* (identified by CG Jung) ⁷ becomes evident too. It alerts humans to *great change* that is upon them, motivating them to anticipate what those changes may be, internally and externally.

In the past it was usually the spiritual masters and wisdom keepers who were able to read the changing energies, symbols, and archetypes correctly and would advise their leaders and teach or guide their communities accordingly, as they were approaching and going through the energy transitions.

The Primary Cycle

A dedicated study of ancient cycles makes it possible to determine when an *epoch* will end. The ‘reset’ of the *precessional cycle* has been determined to take place in 2030 ⁸ (see also next chapter for additional details).

The *Precession of the Equinoxes Cycle* is a *primary cycle* that affects life on Earth in profound and fundamental ways. It influences human consciousness, and its energies *flow through us* on a cellular, organic level. We exist within the cycle, and the cycle exists within us.

This cycle among the celestial bodies has its miniature copy in our own bodies. [...] In twenty-four hours, we breathe 25,920 times. Our little day has a respiratory round on a similar scale of the sun's precession movement. Meantime, our heartbeat averages seventy-two times a minute, and the sun takes seventy-two years to pass one degree along its zodiacal round. [...] The significant point is the intermingling of active physical and super-physical forces. Through our sympathetic nervous system, the intelligent ‘laws of Nature’ time our organic rhythms with the super-conscious heart of the Universe. – Lydia Ross (The Doctrine of Cycles). ⁹

Although we are already naturally and organically *attuned* to the *primary cycle*, our consciousness is still relatively low and therefore lacking in terms of fully comprehending or appreciating this reality. This is because we are still positioned at the low end of the cycle, but as we gradually proceed along the *ascending arc of the Great Year*, we are becoming more aware of our attunement with the cosmos.

Fig. 1 – Earth's Great Year: Precessional Cycle (Outer Cycle) with Maya Five Worlds Cycle & Vedic Yuga Great Year

The *Precession of the Equinoxes Cycle* is also known as *Earth's Great Year*, the *Platonic Year* or *Hamlet's Mill*, and its overall length fluctuates between 24,000 and 26,000 years. Presently, its duration is estimated at 25,772 years. In older literature, it was estimated at 25,920 ⁹ or 25,950 years.

As an aside, this grand cycle is generally rounded off to 24,000, 25,000 or 26,000 years, respectively; by writers for simplicity. Essays by this writer generally refer to 26,000 years to include all considerations, with exceptions when needed. (See also [The Big Picture View](#), ⁸ which explains why the duration of the primary cycle varies).

The Maya and Yuga calendar systems fit into the *precessional cycle*, and both are direct or indirect versions of it. On a deeper level, these ancient systems are *frameworks of cyclicity* that measure the rising, falling, and changeability of consciousness within the context of the *Great Year's energy seasons* (the fractals or segments that are measured within the overall cycle).

A World Turned Upside Down

During a metaphysical cycle's wave-like motion, a *peak* occurs during its midpoint, and a low point is reached toward its end point when it enters a *transition phase* (i.e., a *liminal phase*).

Fig. 2 – Maya Katun Energy Pyramids: Katun 4 Ahau, Katun 2 Ahau & Katun 13 Ahau

When a Maya 'energy pyramid' transitions from one *energy wave* (symbolized by a pyramid) to the next (e.g. between two 19.7-year *katun* cycles ¹⁰ – see Fig. 2) there is an interim low energy period during which there is low energy combined with a confluence of the two cycle's energies, before the energies of the new cycle grow to become dominant.

The transition and overlap phases would take around 2 to 4 years to complete in the case of *katun* ages (see also [Paradigm Shifts in the Age of Polarity](#) for detailed examples ¹¹). In very large cycles, though, *liminal phases* can take *decades* or even *millennia* to run their course.

Importantly, in the ancients' mythologies, these transition periods are depicted as *underworld* phases, and Maya and Hopi wisdom keepers considered them to be times when *the world is turned upside down*. ⁵

The Cyclical Reality of Liminality

Liminality is a timeless phenomenon that has been noted many times over, in all sorts of transitions, and it is of special relevance within the context of *cycle science*. During *liminality*, structures, frameworks, hierarchies, and statuses that usually determine what is normal for that period are suspended or *inverted*.

Liminality is a phenomenon that has *real-world* impacts with regard to humans and societies. It is, however, in many respects *metaphysical*, especially within large-scale social transitions, as its presence or existence

cannot be explained other than by placing it within cyclical frameworks (i.e., within the context of *transitions* between cycles). This makes *liminality* an essential and indispensable component of studying cycles.

Liminality has negative and positive aspects. It provides the circumstances and opportunities for *personal growth* through its challenges, which is, indeed, the purpose of *liminal transitions*, as understood from perspectives within depth psychology and shamanism. *The Hero's Journey*, for example, is a transformative journey through the challenges of *liminality*, and so is the Maya's mythic tale of the *Hero Twins* who transition between *world cycles* every 5,125 years. ¹²

Cycles are Spirals

Liminality is therefore a paradoxical state, both at the individual and the societal level. At the level of the individual, it is the destruction of identity, while at the level of society, it involves the suspension of the structure of social order. However, whether in cases of rituals or crises, the aim is to return to conditions of stability and normality. – Bjørn Thomassen (Liminality and the Modern). ¹³

Liminal periods in the context of cycles are much shorter in duration compared to the cycles themselves (typically 10% of their length). ¹⁴ Although *liminal phases* are not the norm, some people thrive or flourish in them (but not always positively) and would prefer them to the norm, to the extent that they would often artificially simulate or *prolong liminality*.

On a positive level (as stated), *liminal phases* could be conducive for positive personal growth. More commonly (in a modern context), it offers *escapes from reality* and the norm. The downside and danger of *liminality* is that it can be *mistaken for the norm* and could lead to getting *stuck in the void*, resulting in *stagnation and going in circles*, rather than transitioning out of *liminality*.

Fortunately, the *big picture view* is that we have been on the *ascending arc* of the 24,000 to 26,000-year *precessional cycle* since 500 AD ¹ (see Fig. 4). This means that we will be spiraling *upwards* for about 10,000 more years. Our present position in the cycle, which is still very low, should underline the importance of *spiritual evolution* on a personal level within the context of *liminality*.

A Temporary Devolution

Cyclically, after *liminality* runs its course, normative structures will return in *elevated forms*. The *devolutionary dip*, which happens during a *liminal phase*, is a *cyclical necessity* (structurally), but it is a temporary phenomenon that clears the way for *evolved phenomena* to follow in its wake and aftermath of the collapse of the old cycle's corrupted structures and norms.

Although many things are presently collapsing, as can be clearly observed, it does *not* mean that *all internal structures* are collapsing within all people, everywhere. When the *rot* of non-structure deepens sufficiently during *liminality*, temporary and new islands of structure form *naturally*. These "islands" are usually *autonomous individuals* (at first).

People seeking structure *anew* are naturally drawn to each other when things disintegrate sufficiently, and those seeking chaos tend to coalesce as well. A *schism* occurs, and the seekers of new structures and harmonies would become candidates for *ascending out of liminality* into new, improved, and evolved structures, which they would *establish for new stability*.

Fig. 3 – The Tower of Babel (1595) – Painting by Lucas van Valckenborch (1535–1597)
(Lucas van Valckenborch, Public domain, via [Wikimedia Commons](#))³³

These essays are written primarily for a Western audience and from a Western perspective. The *Tower of Babel* analogy assists in this endeavor as it is contextually relevant with regard to post-modernity and the decline of the West. It serves as an analogy to illustrate some of our contemporary *upside down, liminal, underworld realities*.

The Judeo-Christian myth encapsulates the origins, history, identity, and *storylines* of the Western worldview in general. Consequently, the story of the *Tower of Babel*, similar to the *Great Flood*, is a storyline *inherently comprehended* in Western culture and is an important metaphor, even though the West has become very secular in recent decades.

The Inverted Tower and The Ascent

A 'Tower of Babel' scenario that arises during *liminality* constitutes an *inverted tower*. An *ascent* from it is required so that *right-side-up structures* are raised in the *upper world of the new cycle*. As the *new era commences*, the world has to be brought back into balance by fostering and facilitating *new harmony within new structures*.

The complicated part is that the previous cycle's realities and those of the transition period will not be returning in the same ways or forms in the new cycle (if at all), because the *old cycle is coming to an end*, while the new cycle's dynamics and principles are still largely unknown and have not yet formed.

However, to reiterate a point, the reality is that many people are *comfortable* within the *Modern Tower of Babel* and would not recognise it for what it is. The *atmosphere of the underworld* (a place of illusion and delusions) makes it *appear* 'normal and enduring'. There are, however, people who strongly *intuit* and know that something is drastically wrong with the world on a fundamental plane.

Road Maps Out of the Underworld

Fig. 4 – Grand View: Precessional Cycle with Maya and Yuga Cycles Side by Side – Detailed

As a spiritual science, *cycle science* provides knowledge of ancient metaphysical cyclic timelines within frameworks that were measured and defined over thousands of years by civilizations that were at higher stages of spiritual development than ours. These energy map timelines can assist in *ascending* from the *valleys of shadows toward new mountains of light*.

A visualization of *cyclical energy seasons* can assist in clearly pinpointing where we are, where we have come from, and where we are heading. In this way, *direction* is provided that would otherwise not have been available, considering that most people are unaware of metaphysical cycles and shifts that govern the world.

It is during their journeys of transformation *out of the underworld* that many *pathfinders* become *seed carriers* of the *new World*. Some would evolve into *conscious co-creators* ¹⁵ in service of the *Divine* as they align themselves in advance with the natural, directional energy flows of the *post-transition new World*.

Liminality's Deeper Dynamics

A comprehensive study of *liminality* reveals that many dynamics are at play at different stages. According to leading anthropologists and sociologists, large-scale *liminality* (as opposed to small-scale, controlled *liminality* such as during traditional *rites of passage*), typically features some of the phenomena summarized below, while

some of these are also present in small-scale *liminality*, considering that the esoteric principle of the *microcosm* reflecting the *macrocosm* applies.

The key difference between small and large-scale *liminality* is that large-scale *liminality* is much more *dangerous* ¹³ and *chaotic*, with uncertain timelines, whereas small-scale *liminality* is more contained and controlled, with specific entrance and exit points. ¹³

Readers are invited to contemplate how the phenomena listed (below) might relate to the analogy of the *Modern Tower of Babel*, and whether some of these phenomena have been present in their societies in recent years, or are presently active.

There is *broad-scale convergence*; *integration is championed*, *hybridization results* ¹⁶; *ignorance about limits or limitations abound* ¹³ (e.g., open borders are championed); *boundaries collapse* ¹⁷; *a leveling happens* ¹⁸ (e.g., everyone becomes just a number); *homogenization of status unfolds* ¹⁸; *a sense of collective community is experienced* (e.g., “we are all in this together”) *known as ‘communitas’* ¹⁸; *‘centralization of liminality’ occurs* ¹³ (e.g., centralization features everywhere); *ambivalence and ambiguity prevails* ¹³.

Collective ‘morality’ replaces individual morals ¹⁹⁻²¹, (i.e., value systems dissolve, a-morality results), *untruth rules the crowd* ¹⁹; (i.e., “the masses don’t think”); *utopian ideals are championed* ¹⁸ (ideologically).

A sense of senselessness prevails; *boredom and ‘normative nihilism’* ¹³ *are common*; *infiniteness is sensed or experienced* ²²; *a void-like situation develops* ¹³; *identities are lost* ^{13, 18} (identity politics compensate ²³); *‘anti-structure’ is prevalent* ^{18, 24} (e.g., institutional structures are strongly rallied against and there are attempts to dismantle them or overhaul them).

Paradox is rife ¹⁸ (e.g., double standards are ubiquitous), *hierarchies are turned upside down* ¹⁸; *inversions and status reversals are regular* ¹⁸; *imitation is rife* ²⁵ (copycat behavior flourishes); *mimetic rivalry, mimetic spirals and mimetic contagions flare up* ^{26, 27, 28} (see also previous chapter); *scapegoating increases* ²⁹; *mimetic violence and inhumanness are evident* ^{26, 27}; *separations develop* ¹³; *schisms occur* ³⁰ (societies become divided); *authoritarianism and dictatorships arise*. ³¹

Crises become contagious ³⁰ (“everything is in crisis”, e.g., a ‘polycrisis’ or a ‘metacrisis’ is perceived or invoked) ³²; *tricksters enter the scene and create rivalries, steering circumstances for their own self-interest* ¹³ (e.g., ready-made solutions are offered for created crises, such as; enemies, dangers and scapegoats); *opportunists take charge and prolong liminality since they thrive in it*. ³¹

Although the *macrocosm* of large-scale *cyclical liminality* can generally not be avoided (because it is *cyclic*), it can be transcended in the *microcosm* (on a personal level), in various ways.

Sense-making, Self-guidance and Rites of Passage

In the case of real-world liminality, the previously taken-for-granted order of things has actually collapsed. It cannot, therefore, simply be restored. This means that the central task in a real-world large-scale liminal situation is an actual search for order, with all the existential anxiety this entails – Arpad Szakolczai (Reflexive Historical Sociology). ³¹

Being able to make sense of the world during a time of extreme chaos can bring inner stability. It can reduce personal confusion and anxiety. When having a strategy for *sense-making* (through *cycle science*, for example), reference points and route become available, from which *transition pathways* can be outlined. From within these outlines, better decision-making going forward becomes possible (see also the next chapter).

Until a new culture and new society are thoroughly established, there is no prospect of the cessation of anarchy, of a stable order, or of a streamlined progress. No amount of experimentation with political, economic, or any other factors can eradicate the disease so long as it is carried on in the framework of a transitional period. – Pitirim A. Sorokin (The Crisis of Our Age).³

Seeking to create order within disorder and creating structure within non-structure for orderliness and stability (on a local level) until some form of normalcy is established once more (more generally) is an *essential practice* during the *liminal, transition* period. It results in *self-created inner stability* and produces *islands of tranquility* within individuals, families, and small communities.

If rites of passage contain a chaotic, void-like liminal stage, then there must be something or somebody standing outside this void to guide people out of it. In anthropology, this figure is called the master of ceremonies. But what happens in liminal situations when there is no designated master of ceremonies? – Bjorn Thomassen (Liminality and the Modern).¹³

Not getting stuck in *liminality* is *vital*. We need to lead ourselves *out of liminality* because in large-scale *liminality*, there are no *masters of ceremony* to provide guidance, whereas in small-scale, controlled *liminality*, experienced *shamans* or elders guide participants through the processes.¹³

Transforming the World One Person at a Time

The *Hero's Journey* is traditionally understood as a deeply personal, inner journey, which results in personal transformations that would transform the outside world “one person at a time”, which is where the integrity within the journey resides. Traditionally, it is not a collective action.

Although it is a solo journey that requires *courage and tenacity*, it is not an entirely unaccompanied journey. *Helpers* appear along the way, meaning that organic support *emerges* naturally during a *Hero's Journey*, which is a theme clearly depicted in ancient mythologies (and also in the Maya's *Hero Twins* myth).⁹ Many people would attest to it being the case for them, too, during the personal transitions they underwent.

If a significant number of people engage in the *Hero's Journey* within the context of *navigating out of the underworld* into a new *World Cycle*, it becomes an organic, non-collective effort which nonetheless has positive consequences for the *new collective* (as it forms), since symbolically the *old collective stays behind* in the *underworld* as far as consciousness is concerned. The *journey-makers* out of the *underworld* become the *way-showers* for those who would follow.

The interesting part about finding ourselves in this *incredibly rare transition period* is that we are in the unique positions of ‘being birthed’ while we are the ‘midwives’ of the birthing processes at the same time. In that sense, we are the ones we have been waiting for.
